QUESTION 1

What does asg monitor command do?

- A. Monitor health status of entire system
- B. This command does not exist
- C. Monitor traffic on Appliances in Security Group
- D. Show real-time cluster status of Appliances in Security Group

Correct Answer: D

QUESTION 2

What command should be used for collecting diagnostic information about the orchestrator?

- A. cpinfo
- B. orch_info
- C. cpview
- D. asg pert -v

Correct Answer: B

QUESTION 3

What is the default range of physical ports for downlinks on Orchestrator MHO-140?

- A. 25 - 47
- B. 27 - 47
- C. 1 - 48
- D. 1 - 25

Correct Answer: B

QUESTION 4

What is a Security Group?

- A. Logical group of computer and network resources
- B. Group of security administrators

- C. Group of security gateways
- D. Group of appliances with enabled NGTX software blades

Correct Answer: C

QUESTION 5

What is the Iterator process?

- A. Iterator is the process that simulates distribution in case of Appliance failure
- B. Iterator is the process that follow Appliance recovery and simulates what was a distribution if recovered Appliance was alive
- C. Iterator is the process that runs on the Orchestrator and calculates a distribution in case of Appliance failure
- D. Iterator is the process that runs on the Orchestrator and calculates a distribution in case of Appliance recovery

Correct Answer: B

Iterator is the process that follows Appliance recovery and simulates what was a distribution if recovered Appliance was alive. The Iterator process runs on the Security Management Server and simulates the distribution of the Security Gateways if the recovered Appliance was alive. This helps ensure that the network remains secure and the traffic flow is optimized.
