QUESTION 1

Consider the following code:

```
<form>
<input type="checkbox" name="termsService" value="yes" />
Yes, I agree to the Terms of Service.
<input type="submit" value="Register" />
</form>
```

What code would you use to determine if the check box has been checked or not?

A. Document.form[0].termsService.selected

B. Document.form[0].termsService.validityState

C. Document.form[0].termsService.checked

D. Document .form[0].termsService.value

Correct Answer: D

QUESTION 2

Which of the following is not a best practice when using JavaScript libraries?

A. Developers should ensure the library functions they use are cross-browser compatible for the version of HTML they are using.

B. Developers should link to the library file and to each plug in script in the section of the HTML document using the tag.

C. Developers should use plugins from a variety of JavaScript libraries to ensure compatibility.

D. Developers should become familiar with one library then optimize HTML code with that specific library in mind.

Correct Answer: A

QUESTION 3

Which of the following is not a benefit of Web APIs?

A. Web APIs are frameworks that make it easy to build applications over HTTP services that are accessible over a large range of clients.

B. Web APIs provide an interface for developers to write code themselves instead of using APIs developed by others .

C. Web APIs are best used to create resource-oriented services.

D. Before Web APIs developers had to write the entire code for every task they needed to perform.

Correct Answer: C

QUESTION 4

Ashton need to write out the items in any array as a list, with their array index number followed by their value. Which block of code will accomplish this?

○ A.
```
var pets = ['dog', 'cat', 'turtle'];

pets.forEach(function(param1, param2) {
    document.write(param2 + " " + param1 + " ");
});
```

○ B.
```
var pets = ['dog', 'cat', 'turtle'];

pets.forEach(function(param1, param2) {
    document.write(param1 + " " + param2 + " ");
});
```

○ C.
```
var pets = new Array('dog', 'cat', 'turtle');

pets.forEach(function(param1, param2) {
    document.write(param1 + " " + param2 + " ");
});
```

○ D.
```
var pets = new Array('dog', 'cat', 'turtle');

pets.forEach(function(param1, param2) {
    document.write(pets[param1] + " "
    + pets[param2] + " ");
});
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A

QUESTION 5

Which of the following best describes how JavaScript communicates with databases when used with AJAX?

A. It provides a limited set of database operations such as retrieving data and displaying it back to the originating Web page.

B. It performs back-end database operations such as modifying the database schema.

C. It is used to change database security permissions.

D. It was designed to perform queries on databases.

Correct Answer: D
