QUESTION 1

Which data format is supported by SOAP Web services to establish communication between web services consumers and web services providers?

A. CSV

B. XML

C. JSON

D. XLSX

Correct Answer: B

XML (Extensible Markup Language) is the data format that is supported by SOAP (Simple Object Access Protocol) Web services to establish communication between web services consumers and web services providers. XML is a standard format that allows data to be exchanged across different platforms and applications. SOAP Web services use XML to encode the messages and data that are sent and received between the web services endpoints. QUESTION 2

Which two attributes are available while enabling a task as a business object for social networking?

A. Task

B. Project Number

C. Task Number

D. Creation Date

E. Project

Correct Answer: AE

To enable a task as a business object for social networking, you need to select the task and the project attributes. These attributes allow you to identify the task and the project it belongs to, and to view the social conversations related to them. Task number and creation date are not available as attributes for social networking. Project number is available, but it is not required to enable a task as a business object. QUESTION 3

Your administrator creates maintenance conditions on the Maintain Project Enterprise Labor Resources page. An HCM person is included in a condition with a process order value of 1 and, additionally, there are three other conditions, all with a process order value of 10. Identify two correct statements about the Maintain Project Enterprise Labor Resources process as it relates to process order values. (Choose two.)

A. The process creates a resource by using the conditions with a process order value of 10 but does not create more than one resource for the same person even if subsequent conditions apply to the person.

B. For the three conditions that have the same process order value of 10, the records are processed in ascending alphabetic order based on the condition name.

C. For the three conditions that have the same process order value of 10, the records are processed in ascending numeric order based on the condition name.

D. The process creates a resource by using the condition with a process order value of 1 but does not create more than one resource for the same person even if subsequent conditions apply to the person.

Correct Answer: BD

Topic-FAQs for Define Project Enterprise Labor Resources

What\\'s the processing order of project enterprise labor resource maintenance conditions?

Records are processed by the Maintain Project Enterprise Labor Resources process in ascending order based on the process order value that you specify on the Create Condition page. For example, assume that an HCM person is included in a condition with a process order value of 1. If a resource doesn\\'t already exist for that person, then the process creates a resource for the condition with the process order value of 1. The process doesn\\'t create more than one resource for the same person even if subsequent conditions apply to the person.

If multiple conditions have the same process order value, then records are processed in ascending alphabetic order based on the condition name.

QUESTION 4

Your customer wants to automatically allocate unassigned asset lines and common costs across multiple assets based on the construction-in-process cost of each asset. Identify the asset allocation method that you must use as the default method while configuring project types to meet this requirement. (Choose the best answer.)

A. Standard Unit Cost

B. Actual Unit

C. Current Cost

D. Estimated Cost

E. Spread Evenly

Correct Answer: C

Ref: https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19a/oapfm/project-foundation-configuration-manage-project-types.html#OAPFM220111

Topic ?Asset Cost Allocation Methods: Explained

The asset cost allocation method determines how indirect or common costs incurred on a project are allocated to multiple assets.

You can specify an asset cost allocation method to enable Oracle Fusion Project Costing to automatically allocate unassigned asset lines and common costs across multiple assets. Unassigned asset lines typically occur when more than one

asset is assigned to an asset grouping level.

Projects and project templates inherit a default asset cost allocation method from the associated project type. You can override the default at the project level. If you use capital events to allocate costs, then you can also override the asset

cost allocation method at the event level.

The following table describes the available asset cost allocation methods.

Method

Basis of Cost Allocation

Actual Units

Number of units defined for each asset

Current Cost

Construction-in-process (CIP) cost of each asset

Estimated Cost

Estimated cost of each asset

Standard Unit Cost

Combination of the standard unit cost and the number of units defined for each asset Spread Evenly

Equal allocation of cost to each asset

QUESTION 5

You search for resources to fulfill a project resource request but are unable to proceed after receiving the following error message: "The search for resources cannot be completed because the project resource search index is not available. Contact your help desk."

Identify the cause for this error message. (Choose the best answer.)

A. The index is not in the process.

B. The index has been built.

C. The index is in the process of being updated.

D. The most recent update of the index finished successfully.

Correct Answer: C

Ref: https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19a/fapfm/implementing-project-execution-management-applications.html#FAPFM1724547

Topic Submitting the Process to Maintain Project Resource Search Index:

Procedure

Submit the Maintain Project Resource Search Index job set to update the resources that appear on the Search and Evaluate Resources page when a resource manager searches for resources to fulfill project resource requests. The job set

consists of a set of processes that facilitate efficient and rapid searches for qualified resources.

Resource managers can\\'t search for resources or view resource details if the search index isn\\'t available for a project resource request with qualifications or keywords. For project resource requests without qualifications and keywords,

resource managers can search for and evaluate resources based on resource availability even if the search index isn\\'t current or available.

Caution: The search index isn\\'t available if the Maintain Project Resource Search Index job set process fails, or while the process is running.
