**QUESTION 1**

Your organization now wishes to access the Responsive Self Service Procurement application from the navigator or the springboard on all form factors such as mobile phones, tablets, and laptop devices.

After opting in, which search setup needs to be completed?

- A. Stemming
- B. Elastic
- C. Fuzzy
- D. Wildcard

Correct Answer: B

Explanation: To access the Responsive Self Service Procurement application from the navigator or the springboard on all form factors, you need to complete the Elastic search setup after opting in. Elastic search is a smart search engine that provides fast and accurate results for catalog items and services. It also supports features such as auto-suggest, spell check, and synonym search. You can configure the Elastic search settings in the Manage Search Indexes task in the Setup and Maintenance work area. Topic 2, Performance Based Challenges

QUESTION 2

You defined an Approved Supplier List (ASL) with a Blanket Purchase Agreement (BPA) for requisitions. After you submit a requisition with the BPA as a source document, you found an approved requisition and automatically created PO

(Purchase Order). However, the status of this PO was confirmed as "Incomplete" instead of "Open" as expected.

Identify two causes for this behavior. (Choose two.)

- A. The "Approval required for buyer modified lines" check box is deselected in the Configure Requisitioning Business Function.
- B. The "Enable negotiation approval" check box is deselected in the Configure Procurement Business Function.
- C. The "Automatically submit for approval" check box is deselected in the BPA that was referenced from the requisition.
- D. The "Allow Purchase Order Approval" check box is deselected in the Manage Approved Supplier List Status, which assigned ASL's status.

Correct Answer: AC

**QUESTION 3**

You should regularly run reports to protect against fraud.

Which task do you use to select the attributes to be monitored for a supplier model?

- A. Configure Procurement Business function
- B. Manage Common Options for Payables and Procurement
- C. Manage Transmission Configurations
- D. Configure Supplier Registration and Profile Change Request
- E. Manage Audit Policies

Correct Answer: E

Explanation: To select the attributes to be monitored for a supplier model, you use the Manage Audit Policies task in the Setup and Maintenance work area. This task allows you to enable auditing for various business objects, such as

suppliers, supplier sites, supplier contacts, and supplier bank accounts. You can also select the attributes of each business object that you want to audit, such as supplier name, address, tax number, and so on. By enabling auditing, you can

track the changes made to the supplier model and generate audit reports to protect against fraud.

QUESTION 4

Identify three profile options that are used to configure Self Service Procurement. (Choose three.)

- A. POR_DISPLAY_EMBEDDED_ANALYTICS
- B. POR_DISPLAY_CATEGORY_ITEM_COUNT
- C. PO_PRC_AGENT_CATEGORY_ASSIGNMENT
- D. POR_SEARCH_RESULTS_SKIN
- E. PO_DOC_BUILDER_DEFAULT_DOC_TYPE

Correct Answer: ACE

Embedded Analytics is dependent on the availability of Oracle Business Intelligence and Analytics Application. In addition, the profile POR_DISPLAY_EMBEDDED_ANALYTICS needs to have been set to Yes before the metrics are visible to

end users.

QUESTION 5

Identify two correct statements about Local area and Contextual areas in the common UI Shell. (Choose two.)

- A. Local area includes components that directly affect the Contextual area.
- B. Local area can drive the contents of the regional area and the contextual area.
- C. Local area is the main work area and typically contains the transaction form.
- D. Contextual area provides quick access to tools that support business process.
- E. Contextual area can drive the contents of the local area.

Correct Answer: AC

Local Area: The local area is in the center of the UI Shell where users do their work. It is the mainwork area and typically contains the transaction form with the menus and controls that enable users to be productive. Controls in, and the

content or state of, the local area generally affect the contents of the contextual area.

Main Area: This term designates the combination of the Local Area and the Contextual Area. **Contextual Area:** The contextual area is in the right-hand pane of the UI Shell, with controls and contents that generally are affected by controls in,

or the content or state of, the local area; although in specific cases the contextual area can also affect the contents of the local area (causing a local-area reload).
