**QUESTION 1**

What are the two merits of modifying an Oracle Fusion Apps page in Visual Builder Studio? (Choose two.)

- A. You can remove any UI component from the page.
- B. You can edit any UI component anywhere on the page.
- C. You can only edit areas that were set for configurations by Oracle.
- D. You can conditionally hide/show fields in dynamic tables and forms.

Correct Answer: CD

Modifying an Oracle Fusion Apps page in Visual Builder Studio has some advantages over modifying it directly in Fusion Apps. One of them is that you can only edit areas that were set for configurations by Oracle, which ensures that you do not break any functionality or violate any design principles of the original page. Another one is that you can conditionally hide/show fields in dynamic tables and forms, which allows you to customize the UI based on user roles or preferences. QUESTION 2

What is the minimum and maximum number of steps that can be configured on a Guided process?

- A. Minimum 1 and maximum 50
- B. Minimum 1 and maximum 10
- C. Minimum 4 and maximum 10
- D. Minimum 2 and maximum 25

Correct Answer: B

A Guided process is a component that guides users through a series of steps to complete a task or a workflow. A Guided process can have a minimum of one step and a maximum of 10 steps. Each step can have a label, an icon, an optional description, and an optional action. A Guided process can also have optional buttons for navigation or completion. Therefore, option B is the correct answer. References: [Guided Process Component], [oj-sp-guided-process]

QUESTION 3

You created a page based on the Foldout layout template.

How do you ensure that your customer can access it from a mobile phone?

- A. Develop a separate application for mobile devices with a different layout.
- B. Add JavaScript to add responsive design to your page.

- C. Do nothing. Responsive behavior will render the page properly on the device.
- D. Switch to a new template that will fit into a mobile device size.

Correct Answer: C

The easiest way to ensure that your customer can access your page from a mobile phone is to do nothing. Responsive behavior will render the page properly on the device. This is because Redwood design system is built with responsiveness in mind, meaning that it adapts to different screen sizes and orientations automatically. The Foldout layout template, for example, will collapse the foldout panel on smaller devices and show it as a modal dialog when triggered. QUESTION 4

Which three patterns are used in the Redwood Reference App? (Choose three.)

- A. Start Page
- B. Dashboard Landing Page
- C. Vertical Foldout
- D. Welcome Page
- E. Smart Filter and Search
- F. Data Grid Page

Correct Answer: ABE

This question tests your knowledge of the Redwood patterns that are used in the Redwood Reference App, which is a sample application that showcases the Redwood design system and the best practices for creating engaging user

interfaces with Visual Builder Studio. The correct answer is A, B, and E, because these are the three patterns that are used in the Redwood Reference App. The other options are incorrect, because they are not patterns, but components or

templates that can be used in different contexts.

Here is a brief description of each pattern:

Start Page: This pattern is used to provide an overview of the app's functionality and allow users to start a task or a workflow. It consists of a header with a title and subtitle, a primary action button, and a grid of cards with icons and labels.

Dashboard Landing Page: This pattern is used to display key performance indicators (KPIs) and a dashboard grid with information visualizations that highlight and explain business performance. It consists of a header with a title and subtitle,

a primary action button, an in-flow back button, and a dashboard grid with charts, gauges, or tables.

Smart Filter and Search: This pattern is used to enable users to filter and search data based on various criteria and see the results in a table or a list. It consists of a header with a title and subtitle, a smart filter bar with input fields and chips,

an optional search bar with suggestions, and a data grid or list with pagination and sorting.

QUESTION 5

What does a build pipeline in Visual Builder Studio do?

- A. Can only deploy an AgpUI extension to a stand-alone VB instance
- B. Can deploy an AppUI extension to only a single FA instance
- C. Can only package an AgpUI extension, which requires manual deployment
- D. Can deploy an AppUI extension to multiple FA instances

Correct Answer: D

A build pipeline in Visual Builder Studio can deploy an AppUI extension to multiple FA instances by using the Deploy to FA Instance step. This step allows you to specify the target FA instance, the extension type, and the extension name. You can also use the Deploy to VB Instance step to deploy an AppUI extension to a stand-alone VB instance. Therefore, option D is the correct answer.
