**QUESTION 1**

Dave deployed an AppUI extension to an instance by mistake.

How can he fix this?

- A. The extension will be removed in the next quarterly update of Fusion Cloud Apps.
- B. The extension can be undeployed in the Visual Builder Studio's Environment tab.
- C. The extension can be redeployed by opening a service request.
- D. The extension cannot be deleted once deployed.

Correct Answer: B

If Dave deployed an AppUI extension to an instance by mistake, he can fix this by undeploying the extension in the Visual Builder Studio's Environment tab. The Environment tab shows all theFA instances that are connected to Visual Builder Studio and allows you to deploy or undeploy extensions to them. To undeploy an extension, Dave can select the instance and click on the Undeploy button next to the extension name. This will remove the extension from the instance and restore the original UI of Fusion Cloud Apps. Therefore, option B is the correct answer. QUESTION 2

By design, dialog messages interrupt the user and force them to make a decision.

Which three dialog message components are available in Redwood? (Choose three.)

- A. oj-sp-message-dialog-destructive
- B. oj-sp-messages-banner
- C. oj-sp-message-dialog-general
- D. oj-sp-smart-search-page
- E. oj-sp-message-unsaved-changes
- F. oj-sp-message-banner-unsaved-changes

Correct Answer: ACE

This question tests your knowledge of the dialog message components that are available in Redwood, which are used to interrupt the user and force them to make a decision. The correct answer is A, C, and E, because these are the three dialog message components that are available in Redwood. The other options are incorrect, because they are not dialog message components, but banner message components or page templates that can be used in different contexts. Here is a brief description of each dialog message component: oj-sp-message-dialog-destructive: This component is used to display a dialog message that warns the user about an irreversible action that will delete or destroy data. It has a red header with an icon and a title, a body with a message and an

optional description, and two buttons for canceling or confirming the action. oj-sp-message-dialog-general: This component is used to display a dialog message that informs the user about an action that requires their confirmation or

input. It

has a blue header with an icon and a title, a body with a message and an optional description or input field, and one or more buttons for canceling or completing the action.

oj-sp-message-unsaved-changes: This component is used to display a dialog message that alerts the user about unsaved changes that will be lost if they navigate away from the current page. It has a yellow header with an icon and a title, a

body with a message and an optional description, and two buttons for discarding or saving the changes.

QUESTION 3

Which three categories of developers use Visual Builder Studio as a developmental tool? (Choose three.)

- A. Developers creating stand-alone Visual Builder Apps
- B. Developers extending Oracle Cloud Apps
- C. Developers coding PL/SQL procedures in the Fusion database
- D. Fusion Cloud Apps developers

Correct Answer: ABD

Visual Builder Studio is a developmental tool that can be used by three categories of developers:

Developers creating stand-alone Visual Builder Apps: These developers can use Visual Builder Studio to create web and mobile apps that use Visual Builder's low-code development environment and access various backend services.

Developers extending Oracle Cloud Apps: These developers can use Visual Builder Studio to create AppUI extensions that enhance the user interface of Oracle Cloud Apps, such as adding new pages, components, or actions. Fusion Cloud

Apps developers: These developers can use Visual Builder Studio to create custom business objects and REST services that extend the functionality of Fusion Cloud Apps, such as adding new fields, validations, or triggers. Therefore, options

A, B, and D are the correct answers. References: [Visual Builder Studio Overview], [Extending Oracle Cloud Applications with Visual Builder]

QUESTION 4

Jim has been working on some changes in a workspace but the project manager wants Tammy to continue the work Jim did. How can they achieve this?

- A. Jim can change ownership of the existing workspace.
- B. Jim needs to first commit and push his changes to the central Git branch for Tammy to create a new workspace.

C. Tammy can create a new workspace based on Jim\\'s workspace.

Correct Answer: C

The best way to achieve this is to have Tammy create a new workspace based on Jim\\'s workspace. A workspace is a private copy of the code that you can work on without affecting other developers. You can create a new workspace from an existing one by selecting the option "Create Workspace From" in Visual Builder Studio. This will copy all the changes from the source workspace to the new one, allowing Tammy to continue the work Jim did. QUESTION 5

You are designing the UI to display information about a product and are asked to use the card layout, such that:

?The card layout summarizes the available information about a product in a visually compact manner.

?The card layout is used as an entry point from where users can access additional details.

Which card layout is suitable for the above requirements?

- A. Object Card
- B. Mini Card
- C. mage Card
- D. Scoreboard

Correct Answer: A

The Object Card layout is suitable for displaying information about a product and using it as an entry point from where users can access additional details. The Object Card layout consists of a header with an icon and a title, a body with one or more fields or actions, and a footer with optional actions or indicators. The Object Card layout summarizes the available information about a product in a visually compact manner and allows users to perform actions on it or navigate to more details. Therefore, option A is the correct answer. References: [Object Card Layout], [oj-sp-object-card]
