**QUESTION 1**

While using the Simple Create and Edit Page Template Pattern, which dynamic component can be used in the "main" slot?

- A. Dynamic Form
- B. Dynamic Container
- C. Dynamic Table
- D. Dynamic Section Binding E. Dynamic Field Binding

Correct Answer: A

The dynamic component that can be used in the "main" slot of the Simple Create and Edit Page Template Pattern is Dynamic Form. This component allows you to create forms that are bound to data sources and can be configured as create

or edit forms. You can use Dynamic Form to display and edit fields from your data source in a simple and consistent way.

Dynamic Form Component in Visual Builder

QUESTION 2

You receive a request to create a new page for Fusion users to enable them to see data about orders stored in Fusion Cloud Apps. How will you fulfill this request?

- A. This is not possible, without SQL access to the Fusion database.
- B. Spin up an instance of WebLogic and deploy a Visual Builder app on top of it.
- C. Spin up a new instance of Visual Builder and deploy a stand-alone app.
- D. This can be achieved with VB Studio in Fusion Apps.

Correct Answer: D

The best option to fulfill this request is to use VB Studio in Fusion Apps. This is a feature of Visual Builder Studio that allows you to create AppUI extensions for Fusion Apps pages. You can use the same development platform that Oracle Cloud Applications are built on, leveraging the Redwood design system, templates, patterns, and components. You can also access data from Fusion Apps using the service catalog and deploy your extensions directly to your Fusion Apps instance. QUESTION 3

What are the two merits of modifying an Oracle Fusion Apps page in Visual Builder Studio? (Choose two.)

- A. You can remove any UI component from the page.
- B. You can edit any UI component anywhere on the page.
- C. You can only edit areas that were set for configurations by Oracle.
- D. You can conditionally hide/show fields in dynamic tables and forms.

Correct Answer: CD

Modifying an Oracle Fusion Apps page in Visual Builder Studio has some advantages over modifying it directly in Fusion Apps. One of them is that you can only edit areas that were set for configurations by Oracle, which ensures that you do not break any functionality or violate any design principles of the original page. Another one is that you can conditionally hide/show fields in dynamic tables and forms, which allows you to customize the UI based on user roles or preferences. QUESTION 4

What is the minimum and maximum number of steps that can be configured on a Guided process?

- A. Minimum 1 and maximum 50
- B. Minimum 1 and maximum 10
- C. Minimum 4 and maximum 10
- D. Minimum 2 and maximum 25

Correct Answer: B

A Guided process is a component that guides users through a series of steps to complete a task or a workflow. A Guided process can have a minimum of one step and a maximum of 10 steps. Each step can have a label, an icon, an optional description, and an optional action. A Guided process can also have optional buttons for navigation or completion. Therefore, option B is the correct answer. References: [Guided Process Component], [oj-sp-guided-process]

QUESTION 5

What does a build pipeline in Visual Builder Studio do?

- A. Can only deploy an AgpUI extension to a stand-alone VB instance
- B. Can deploy an AppUI extension to only a single FA instance
- C. Can only package an AgpUI extension, which requires manual deployment
- D. Can deploy an AppUI extension to multiple FA instances

Correct Answer: D

A build pipeline in Visual Builder Studio can deploy an AppUI extension to multiple FA instances by using the Deploy to FA Instance step. This step allows you to specify the target FA instance, the extension type, and the extension name.

You can also use the Deploy to VB Instance step to deploy an AppUI extension to a stand-alone VB instance. Therefore, option D is the correct answer. References: [Deploying AppUI Extensions], [Deploying Extensions to Fusion Applications]
