**QUESTION 1**

Which two are true about using the ACCESSIBLE BY clause? (Choose two.)

- A. It can be used in the declaration of object types.
- B. It must be specified in the heading of a package specification.
- C. The check is enforced by this clause for direct access and access through dynamic SQL.
- D. It can be used for individual procedures and functions declared in a package specification.
- E. It must be specified in the heading of a package body.

Correct Answer: AD

<https://docs.oracle.com/database/122/LNPLS/ACCESSIBLE-BY-clause.htm>

QUESTION 2

Which two are true about named notations in a PL/SQL subprogram? (Choose two.)

- A. The actual parameters must be specified in the same order as the formal parameters are declared.
- B. Specifying actual parameters in the wrong order results in the subprogram terminating with an exception.
- C. Only trailing optional parameters can be omitted in the invocation call.
- D. The subprogram invocations must be changed when the formal parameter list acquires new required parameters.
- E. Any optional parameters can be omitted in the invocation call.

Correct Answer: AE

QUESTION 3

Which three statements are true about Implicit Cursor and Explicit Cursor? (Choose three.)

- A. Implicit cursor returns only one record.
- B. Explicit cursor can return more than one record.
- C. %Isopen, %Rowtype, %Notfound, and %Found are the attributes of Explicit Cursor.
- D. %Isopen, %Rowcount, %Notfound, and %Found are the attributes of Explicit Cursor.
- E. %Isopen, %Type, %Notfound, and %Found are the attributes of Explicit Cursor.
- F. %Isopen is always false in Explicit Cursor.
- G. %Isopen is always false in Implicit Cursor.

Correct Answer: BCG

QUESTION 4

Which two are true about the PLSQL_CODE_TYPE parameter? (Choose two.)

- A. Changing the parameter setting automatically changes the setting for existing PL/SQL library units.
- B. The default value is NATIVE.
- C. If set to NATIVE, programs are stored in platform dependent machine code.
- D. It can use the REUSE SETTINGS clause to recompile a program unit without changing to the current session settings.
- E. If set to NATIVE, programs are stored in a PL/SQL bytecode format.

Correct Answer: CD

QUESTION 5

Which three are true about PL/SQL subprograms? (Choose three.)

- A. Results of a subprogram can be cached in the SGA such that sessions connected to the same instance can reuse these results when available.
- B. Users granted execute privilege on a procedure compiled with definer's rights require grants to access objects belonging to the definer that are referenced in the procedure.
- C. Subprograms are cached by default and shared among users, thereby reducing memory requirements.
- D. Reuse of parsed PL/SQL code from the shared SQL area reduces parsing overhead.
- E. A subprogram's session state is retained even if any of the session's instantiated subprograms are invalidated and revalidated.
- F. Host variables can be referenced inside any PL/SQL subprogram.
- G. A PL/SQL procedure can invoke an external code block written in a different programming language.

Correct Answer: CDG
