**QUESTION 1**

A company is currently experiencing long infrastructure provisioning times, given that the process to ask, review, approve and deploy their services is manual with many people involved. It is considering vRealize Automation as a resolution, but it wants to better understand how much resources it is going to need. Which three should the architect

consider when determining the appropriate vRealize Automation deployment size for this environment? (Choose three.)

- A. number of managed machines
- B. number of concurrent machine provisions
- C. number of catalog items
- D. number of blueprints
- E. number of endpoints

Correct Answer: BCD

---

**QUESTION 2**

A company has been successfully deploying virtual machines to its data center in Boston for over a year. The architect has added the endpoint in vRealize Automation and been tasked with consuming the resources in a new data center in Las Vegas.

With minimal change to the catalog design, which two design options could the architect consider in order to enable users to begin deploying machines to both data centers? (Choose two.)

- A. Configure the locations.xml file on the IaaS Manager servers to contain a location for Las Vegas. Select `Display Location on Request` within your existing blueprints.
- B. Create a new reservation utilizing compute resources in Las Vegas. Create a new reservation policy and assign it to the new reservation.
- C. Configure the locations.xml file on the IaaS Web servers to contain a location for Las Vegas. Select `Display location on request` within your existing blueprints.
- D. Copy your existing blueprints and set the reservation policy to the new reservation policy that is set on the Las Vegas reservation.
- E. Create a new reservation utilizing compute resources in Las Vegas. Set the reservation policy to the same as the Boston reservation.

Correct Answer: BE

---

**QUESTION 3**

A company has a main office, three regional offices, and six branches offices. The network links are configured as shown in the exhibit. View the Exhibit:

During information gathering, an architect records: The regional offices are located in secure bunkers. The CTO feels this would be a good location for all the vRealize Automation components to meet their BC/DR objectives. However, the CTO is looking for the best design while maintaining their very high security requirements. The branch offices are located in very remote locations with unpredictable network performance. Reliance on the main and regional offices needs to be minimal while still allowing provisioning of machines in the branch offices. The branch offices consist of three host vSphere clusters. There is synchronous vSphere Metro Storage Cluster (vMSC) between the regional offices as well as replicated backups between the regional offices with replication running nightly. The CEO wants to have the lowest possible RPO and RTO of the vRealize portal including the ability to manage already provisioned machines while NOT increasing the amount of data being replicated between the regional offices as much as possible. Referring to the exhibit, which two design specifications can the architect recommend to meet requirements? (Choose two.)

- A. distributed vRealize Automation management solution in the main office
- B. vSphere agents in each of the branch offices
- C. distributed vRealize Automation management solution in each of the regional offices
- D. distributed vRealize Automation management solution across the regional offices
- E. vSphere agents in the regional offices that manage the regional and branch offices

Correct Answer: DE

#### QUESTION 4

An architect is tasked with designing a multi-region Software Defined Data Center (SDDC) deployment. The operations team has mandated that the solution enable real-time logging for all automation components. The architect makes a design decision to use a vRealize Log Insight cluster in each region, consisting of a total of three nodes. Which three data sources are required to be in scope? (Choose three.)

- A. vRealize Automation Appliance
- B. NSX Manager, NSX Controller instances and NSX Edge instances
- C. vRealize Operations Manager

D. vRealize Orchestrator

E. vRealize IaaS Server

Correct Answer: ABC

---

#### QUESTION 5

A development team has requested the ability to refresh database contents for existing pre-production SQL servers managed by vRealize Automation. The developers have provided the cloud architect with a T-SQL script suitable for performing this task. Which design recommendation would address the requirements of this scenario?

A. Build a software component to run the T-SQL script.

B. Design an XaaS blueprint based on a custom Orchestrator workflow.

C. Design a blueprint and use custom properties to run the T-SQL script.

D. Build a resource action and publish it to the developers.

Correct Answer: A
