**QUESTION 1**

You need to recommend a solution to install updates for App3 once App3 is deployed.

What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Sequence the new components of App3 as a Microsoft Application Virtualization (App-V) package. Deploy the App-V package to all of the servers that run App3.
- B. Create a collection that contains all of the servers that run App3. Create an application to deploy the updates for App3. Deploy the application to the collection.
- C. Create a new version of the existing service template, and then modify the new service template. Apply the template to the existing instances of App3.
- D. Create a runbook to deploy the updates to App3. Launch the runbook from a service request.

Correct Answer: C

App3 was deployed using a service template. It should be updated using a service template.

To apply updates to a deployed service by using an updated service template

1.
In the VMs and Service workspace, select the service that you want to update with the updated service template.
2.
On the Service tab, in the Update group, click Set Template.
3.
In the Change Service Template wizard, on the Updated Service Template page, select Replace the current template with an updated template for this service.
4.
Click Browse, select the updated service template, click OK, and then click Next.
5.
On the Settings page, configure any application settings that are listed, and then click Next.
6.
On the Update Method page, select whether you want to make the updates in-place to the existing virtual machines or whether you want to deploy new virtual machines with the updated settings, and then click Next.

QUESTION 2

Your company has a private cloud that is managed by a System Center Service Manager 2010 Service Pack 1 (SP1) infrastructure. The infrastructure contains four servers as shown in the following table.

Server name	Server role
MGT1	Management server
DATA1	Data warehouse management server
SSRS1	Microsoft SQL Server Reporting Services
SQL1	Microsoft SQL Server

You upgrade MGT1 and DATA1 to Service Manager 2012.

You need to ensure that DATA1 can continue to deploy reports to SSRS1.

Which two tasks should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Copy the Microsoft.EnterpriseManagement.Reporting.Code.dll file to SSRS1.
- B. Modify the RSReportServer.config file on MGT1.
- C. Modify the RSReportServer.config file on SSRS1.
- D. Modify the RSSrvPolicy.config file on DATA1.
- E. Modify the RSSrvPolicy.config file on SQL1.
- F. Copy the Microsoft.EnterpriseManagement.Reporting.Code.dll file to SQL1.

Correct Answer: AC

QUESTION 3

You are the datacenter administrator for a company named Contoso, Ltd.

The network contains a server that has System Center 2012 Virtual Machine Manager (VMM) installed.

You create four private clouds.

Developers at Contoso have two Windows Azure subscriptions.

Contoso creates a partnership with another company named A.Datum.

The A.Datum network contains a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains three clouds.

Developers at A.Datum have two Windows Azure subscriptions.

You deploy System Center 2012 App Controller at A.Datum.

You plan to manage the clouds and the Windows Azure subscriptions for both companies from the App Controller portal.

You need to identify the minimum number of subscriptions and the minimum number connections required for the

planned management.

How many connections and subscriptions should you identify?

- A. Two connections and four subscriptions
- B. Two connections and two subscriptions
- C. Four connections and four subscriptions
- D. Eight connections and four subscriptions
- E. Four connections and two subscriptions

Correct Answer: A

"Contoso has four clouds."

Connecting to a private cloud means establishing a connection to a VMM 2012 Management Server. However, you can also add a Windows Azure subscription to App Controller. Before anyone can use App Controller, an administrator must

configure it to communicate with VMM for private clouds, or Windows Azure for public cloud services. Connecting App Controller to VMM is straightforward.

Connecting (or subscribing) App Controller to an Azure subscription requires a little more work. One of the coolest features of App Controller is its support for multiple connections and subscriptions. If for business reasons you implement

different VMM deployments, you can connect App Controller to each deployment. Similarly, if you have multiple subscriptions to the Microsoft Azure service, you can add them to App Controller.

QUESTION 4

You need to implement the planned changes for the network technicians.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Create a Run As Account.
- B. Create a classification.
- C. Deploy System Center 2012 App Controller.
- D. Deploy the VMM console.
- E. Create a user role.

Correct Answer: AD

QUESTION 5

You need to recommend a solution to identify which servers should be virtualized.

What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Configuration Manager P2V Migration Toolkit
- B. Windows Assessment and Deployment Kit (Windows ADK)
- C. Microsoft System Center Advisor (SCA)
- D. Microsoft Assessment and Planning (MAP) Toolkit

Correct Answer: D
