**QUESTION 1**

You plan to execute the following code:

```
01 CREATE TABLE dbo.Table1
02 (
03     datavalue varchar(20)
04 );
05 GO
06 BEGIN TRANSACTION;
07 INSERT INTO Table1 VALUES('entry1');
08     BEGIN TRANSACTION;
09         INSERT INTO Table1 VALUES('entry2');
10     COMMIT TRANSACTION;
11 INSERT INTO Table1 VALUES('entry3');
12 ROLLBACK TRANSACTION;
13 Go
```

You need to identify how many rows will be in dbo.Table1 after you execute the code.

How many rows should you identify?

- A. 0
- B. 1
- C. 2
- D. 3

Correct Answer: A

QUESTION 2

You execute the following code:

```
CREATE TABLE Customers
(
  id int primary key,
  name nchar(10)
)
GO
```

You discover that the Customers table was created in the dbo schema.

You need to create a code segment to move the table to another schema named Schema2.

What should you create?

To answer, drag the appropriate code segments to the correct location in the answer area. (Answer choices may be used once, more than once, or not at all.)

Select and Place:

Code Segments	Answer Area
ALTER SCHEMA	Code
ALTER TABLE	Code
dbo	Code
dbo.Customers	Code
EXEC sp_rename	
TRANSFER	
Schema2	

Correct Answer:

Code Segments	Answer Area
<input type="text"/>	ALTER SCHEMA
ALTER TABLE	Schema2
dbo	TRANSFER
<input type="text"/>	dbo.Customers
EXEC sp_rename	
<input type="text"/>	
<input type="text"/>

QUESTION 3

Developers report that usp_UpdateSessionRoom periodically returns error 3960.

You need to prevent the error from occurring. The solution must ensure that the stored procedure returns the original values to all of the updated rows.

What should you configure in Procedures.sql?

- A. Replace line 46 with the following code: SET TRANSACTION ISOLATION LEVEL SERIALIZABLE
- B. Replace line 46 with the following code: SET TRANSACTION ISOLATION LEVEL REPEATABLE READ
- C. Move the SELECT statement at line 49 to line 57.
- D. Move the SET statement at line 46 to line 53.

Correct Answer: A

QUESTION 4

You need to modify usp.GetOrdersAndItems to ensure that an order is NOT retrieved by usp_GetOrdersAndItems while the order is being updated. What should you add to usp.GetOrdersAndItems?

- A. Add WITH (NOLOCK) to the end of line 47.

B. Add SET TRANSACTION ISOLATION LEVEL READ COMMITTED to line 44.

C. Add SET TRANSACTION ISOLATION LEVEL READ UNCOMMITTED to line 44.

D. Add WITH (READPAST) to the end of line 47.

Correct Answer: B

The SET TRANSACTION ISOLATION LEVEL SERIALIZABLE statement specifies that no other statement can read data that has been modified but not yet committed by other transactions. Incorrect Answers:

B: The WITH (UPDLOCK) table hint specifies that the database engine will not update or delete a row that is locked by other transactions.

C: The SET TRANSACTION ISOLATION LEVEL SNAPSHOT statement specifies that data read by any statement in a transaction will be the transactionally consistent version of the data that existed at the start of the transaction. It does not prevent data that is being updated from being read.

D: The WITH (READPAST) table hint specifies that the database engine will skip past a row that is locked by other transactions. However, READPAST can only be specified for a table referenced in an UPDATE or DELETE statement, or for table referenced in a FROM clause.

QUESTION 5

You need to ensure that usp_AddXMLOrder can be used to validate the XML input from the retailers.

Which parameters should you add to usp_AddXMLOrder on line 04 and line 05? (Each correct answer presents part of the solution. Choose all that apply.)

A. @schema varbinary(100).

B. @items varchar(max).

C. @schema sysname.

D. @items varbinary(max).

E. @items xml.

F. @schema xml.

Correct Answer: CE
