QUESTION 1

What purpose do default test values serve when creating an interface?

A. Default test values arc used to define local variables in an interface.

B. Pre-populates rule inputs give designers a representation of what users will see.

C. Default test values arc used to improve the run time performance of an interface.

D. Pre-populates form data for end users at runtime.

Correct Answer: D

Default test values provide a starting point for users when filling out a form and ensure that the form is populated with valid data. These values can be based on predefined values, constants, expressions or other data sources.
