QUESTION 1

In Unisphere, a storage administrator has inadvertently disabled Data Reduction on an existing LUN. What would result from this action?

A. A background LUN migration occurs, moving the data to a new LUN where it is inflated. New data is neither deduplicated nor compressed.

B. Existing data is left in its current state. New data is neither deduplicated nor compressed.

C. Existing data is dynamically inflated to its full size, undoing the impact of deduplication and compression. New data is neither deduplicated nor compressed.

D. Data Reduction, once enabled, cannot be disabled. New data is deduplicated or compressed.

Correct Answer: B

QUESTION 2

How long will a Copy Back operation take when a hot spare is invoked?

A. Pro-Active hot spare does not use a Copy Back operation

B. Copy Back time depends on the RAID type

C. Copy Back time depends on the disk capacity

D. Copy Back time depends on the disk type

Correct Answer: B

Note: Starting with Release 24, you can now use a proactive hot spare for proactive disk replacement. Before Release 24 you had to remove the physical disk to replace in order to force a rebuild. During the rebuild phase, the RAID group

was "degraded" and at risk.

Resolution:

Three main benefits of using a proactive hot spare:

Avoiding "uncorrectable errors" due to media problems during the rebuild process.

Greatly reduce the risk of having a degraded RAID group, and the risk of having a double-faulted RAID group.

Performance - a copy to hot spare is faster than a normal rebuild.

QUESTION 3

Fibre Channel access from a server to the Storage Processor can use what pathing options?

A. Single Path, Multipath, and Alternate path

B. Single path and Multipath only

C. Single Path and Alternate path only

D. Multipath only

Correct Answer: B

QUESTION 4

A company has a VMware host installed with FC HBAs that is connected to a Dell EMC Unity XT storage array. A 500 GB LUN is provisioned to this host from the Unity array and is in production. The VMware administrator has configured a new vSwitch with the NICs on the server intended for iSCSI traffic. The storage administrator is asked to configure software iSCSI and provision a new 1 TB LUN from the storage array via iSCSI.

What is a consideration when satisfying this request?

A. A connection must be established between the host iSCSI initiators and Unity iSCSI targets before provisioning the new LUN

B. Any single host should connect to any single array using one protocol only

C. The iSCSI configuration must use all the NIC connections to the host

D. Two iSCSI target interfaces must be configured with IP addresses from separate subnets

Correct Answer: D

QUESTION 5

Which IP connection characteristic is used only for file-based storage configurations on Dell EMC Unity XT?

A. Link aggregation

B. VLAN tagging

C. Bandwidth throttle

D. Network latency

Correct Answer: B
