QUESTION 2

A company is looking to manage their Windows Servers and Desktops with CyberArk EPM. Management would like to define different default policies between the Windows Servers and Windows Desktops.

What should the EPM Administrator do?

- A. In the Default Policies, exclude either the Windows Servers or the Windows Desktops.
- B. Create Advanced Policies to apply different policies between Windows Servers and Windows Desktops.
- C. CyberArk does not recommend installing EPM Agents on Windows Servers.
- D. Create a separate Set for Windows Servers and Windows Desktops.

Correct Answer: B

QUESTION 3

An end user is reporting that an application that needs administrative rights is crashing when selecting a certain option menu item. The Application is part of an advanced elevate policy and is working correctly except when using that menu item.

What could be the EPM cause of the error?

- A. The Users defined in the advanced policy do not include the end user running the application.
- B. The Advanced: Time options are not set correctly to include the time that the user is running the application at.
- C. The Elevate Child Processes option is not enabled.
- D. The Specify permissions to be set for selected Services on End-user Computers is set to Allow Start/Stop

Correct Answer: C

QUESTION 4

When working with credential rotation at the EPM level, what is the minimum time period that can be set between connections?

- A. 1 hour
- B. 5 hours
- C. 24 hours
- D. 72 hours

Correct Answer: D

QUESTION 5

What are Trusted sources for Windows endpoints used for?

- A. Creating policies that contain trusted sources of applications.
- B. Defining applications that can be used by the developers.
- C. Listing all the approved application to the end users.
- D. Managing groups added by recommendation.

Correct Answer: C
