**QUESTION 1**

What happens to images that are imported into Prism Central?

A. Copied to the Prism Central image repository

B. Remain in the source duster after import

C. Copied to all clusters managed by Prism Central

D. Deleted from the source cluster after import

Correct Answer: A

The Prism Central image repository is a centralized location for storing virtual machine images that can be used to deploy VMs to any cluster managed by Prism Central. When an image is imported into Prism Central, a copy of the image is made and stored in the repository, so that it can be easily accessed and deployed to any cluster as needed. The original image file typically remains in the source cluster after it is imported into Prism Central, unless it is explicitly deleted. Similarly, the image copy in the Prism Central repository is not automatically copied to all clusters managed by Prism Central, but can be used to deploy new VMs on any cluster as needed.

**QUESTION 2**

Which cluster configuration is LCM unable to perform firmware upgrades against?

A. Five-node

B. Three-node

C. Two-node

D. Single--node

Correct Answer: D

LCM (Lifecycle Manager) is a tool provided by Nutanix to automate software and firmware upgrades for Nutanix clusters. However, LCM is unable to perform firmware upgrades against a (D) Single-node cluster configuration. This is because a single-node cluster does not have any redundancy, so there is no way to perform an upgrade without taking the entire cluster offline. In contrast, multi-node clusters can typically be upgraded in a rolling fashion, with one or more nodes being upgraded at a time while the rest of the cluster remains online. LCM is capable of performing firmware upgrades against two-node, three-node, and five-node cluster configurations, as long as they meet the other requirements for LCM support (such as being on a supported AOS release and having the appropriate network connectivity).

**QUESTION 3**

An administrator needs to send weekly performance reviews to several line of business managers about VMs they are managing. Which tool should the administrator use to satisfy this task?

A. Prism Elements Links to Chart analysis

B. Prism Elements New Alert policy

C. Prism Central Projects with data export

D. Prism Central Reports with a schedule

Correct Answer: D

To send weekly performance reviews to several line of business managers about VMs they are managing, the administrator should use Prism Central Reports with a schedule. Prism Central Reports is a tool that allows the administrator to create custom reports, which can include information such as CPU usage, memory usage, and disk I/O for specific VMs. The administrator can schedule the reports to be generated and sent out on a regular basis, such as weekly. This will allow the line of business managers to review the performance of the VMs they are responsible for on a regular basis, and take appropriate actions if necessary. QUESTION 4

Which LCM feature simplifies upgrades on clusters without Internet access?

A. One-Click Upgrade

B. NCC

C. Direct Upload

D. FTP

Correct Answer: C

Direct Upload is a LCM feature that simplifies upgrades on clusters without Internet access. It allows users to upload the desired version of the software to the cluster using a USB drive or other portable storage device, and then install it without the need to access the Internet. QUESTION 5

An administrator needs to check which users have created VMs within the previous two weeks.

How can the administrator satisfy this task?

A. Create a filter in Prism Central Audits page

B. CSV export Events list from Prism Central page

C. Sort operation messages in Prism Element Tasks page

D. Use Analysis Page in Prism Element and adjust time range

Correct Answer: A
