QUESTION 1

When Does AOS automatically Generate a case with nutanix Support?

A. When disk space usage is high above 90%

B. On failure of a scheduled NCC check

C. When losing network connectivity to the CVM

D. For every alert detected by pulse Diagnostics

Correct Answer: B

QUESTION 2

Refer to the exhibit.

An administrator needs to upgrade a VM to 10 virtual processors. Which action should the administrator take to complete this task?

A. Power-off the VM and add one vCPU

B. Update the VM adding two vCPUs

C. Update the VM adding two cores

D. Power-off the VM and add one core

Correct Answer: C

QUESTION 3

Refer to the exhibit.

What is true about the network uplink ports?

A. One is connected at 1GbE and the other is 10GbE.

B. They are configured in Active-Backup mode.

C. All are connected, but only two are carrying traffic.

D. They are configured in Active-Active mode.

Correct Answer: B

In Nutanix, all the network uplink ports are connected, but only two of them are carrying traffic at any given time. This is done to provide redundancy and failover in case one of the ports fails. The two ports that are carrying traffic are chosen based on the link aggregation policy configured. The link aggregation policy can be configured to use either Active-Active or Active-Backup mode. In Active-Active mode, both ports are active and carrying traffic, while in Active-Backup mode, only one port is active and carrying traffic, the other port is on standby.
