**QUESTION 1**

Which of the following is an expected result of successfully adopting SOA?

- A. A natural increase in runtime performance that you will gain as a result of the fact that service compositions will often be comprised of a greater amount of individually participating programs (services) than traditional distributed applications.
- B. The fact that the existing IT organizational structure will not have to change because of how well a service-oriented enterprise fits into traditional IT departmental structures that are focused on project-centric application delivery.
- C. The tactical (short-term) focus of service-orientation, which allows for the initial rapid delivery of services without concerns about their subsequent governance.
- D. The strategic (long-term) target state that is attainable when many of the services delivered are interoperable and reusable, thereby allowing for them to be repeatedly composed in response to new and changing business requirements.

Correct Answer: D

QUESTION 2

Service-oriented computing aims to increase an organization's responsiveness by allowing it to adapt to change more efficiently and effectively. This is known as:

- A. organizational diversity
- B. organizational agility
- C. organizational federation
- D. organizational interoperability

Correct Answer: B

QUESTION 3

Service A is invoked by Desktop Application A, which requests a data value from Service A. In order for Service A to retrieve this data value, it must invoke Service B, which retrieves the value from Database A. Which participant(s) in this scenario are considered service consumers? SELECT ALL THAT APPLY

- A. Service A
- B. Service B
- C. Desktop Application A
- D. Database A

Correct Answer: AC

QUESTION 4

Agnostic solution logic is logic that is considered single-purpose because it is unique to one task. Select the correct answer.

- A. True
- B. False

Correct Answer: B

QUESTION 5

Service A invokes ServiceB. Service B invokes ServiceC. Service C invokes both Service D and Service E. In this runtime scenario, which services are acting as service consumers?

- A. Service A, Service B, Service C
- B. Service D, Service E
- C. Service A
- D. None, because a service cannot also be a service consumer.

Correct Answer: A
