**QUESTION 1**

A DRS cluster has been created with two ESXi hosts. One host in the cluster is running at 98 percent CPU utilization. The other host is running at 52 percent utilization. Upon analysis, it appears that none of the virtual machines are being migrated from the CPU-constrained host, and no recommendations are being generated.

What are the two most likely causes of the problem? (Choose two.)

- A. The VMkernel port is assigned an incorrect IP address.
- B. VMotion is not enabled on the VMkernel port.
- C. DRS migration Threshold is not set high enough.
- D. VMware DRS is not set to Fully Automated.

Correct Answer: AB

Since the virtual machines are not migrated from CPU-constrained host, the problem might be the VMkernel port is assigned an incorrect IP address. IF the VMkernel port has the right IP address, check whether vMotion si enabled on the VMkernel port.

QUESTION 2

The administrator has deployed a third-party virtual appliance in the organization\'s vSphere environment and needs to use Update Manager to maintain the third-party appliance. How should the administrator accomplish this task with the least administrative effort?

- A. Add a new Download Source to Update Manager to obtain updates from the third party
- B. Manually download the third-party updates to Update Manager, which will then apply them to the appliance
- C. Obtain an update tool from the third party and use it to manage updates to the appliance
- D. Identify the third-party appliance from the supported list within Update Manager

Correct Answer: A

QUESTION 3

Under which two conditions is a master elected by vSphere HA? (Choose two.)

- A. When any cluster is created
- B. When a host is placed into maintenance mode
- C. When the datastore configuration changes
- D. When "Reconfigure for vSphere HA" is executed

Correct Answer: BD

When the host is placed in maintenance mode and when the reconfigure for vSphere HA is executed on the primary master, the master election is conducted by vSphere HA.

QUESTION 4

Which two statements are true regarding a mixed DRS cluster with Intel-based and AMD- based ESXi 5.x hosts? (Choose two.)

- A. DRS can load-balance running virtual machines, assuming multiple hosts per CPU family.
- B. HA can only failover virtual machines to hosts within the same CPU family.
- C. Cold Migration may be needed to balance the performance load on the cluster
- D. Storage vMotion will not be available for this cluster

Correct Answer: AC

QUESTION 5

A VMware administrator needs to export a vApp and create a self-contained package that has a single file.

Which format should the administrator use?

- A. Export as OVF
- B. Export as OVA
- C. Export as ZIP
- D. Export as ISO

Correct Answer: B
