QUESTION 1

The nbemmcmd -getemmserver command on a new NetBackup media server produces the error displayed below.

Failed to initialize EMM connection.

Which two steps are used to diagnose the issue? (Choose two.)

A. Verify that the nbemm and pbx_exchange daemons/services are running on the master server.

B. Telnet from the master server to the media server\\'s VNETD port.

C. Verify that network access to the master server is available.

D. Remove the media server name from the additional servers list on the master server.

E. Run the bpclntcmd -hn command on the master server to confirm that the master server was able to resolve its own hostname.

Correct Answer: AC

QUESTION 2

Which statement about Microsoft Exchange backups is true in NetBackup?

A. Individual mail messages can be restored.

B. Exchange must be shut down to be backed up consistently.

C. The entire Exchange database must be restored as a whole.

D. Individual Exchange mailboxes can be restored, but not individual messages.

Correct Answer: A

Granular Recovery Technology provides this functionality for Exchange.

QUESTION 3

Where are the NetBackup track logs located by default when backing up a NetApp filer using the NDMP policy type with NetBackup Accelerator enabled?

A. on a NetBackup client

B. on the NetApp filer

C. on a user defined network share

D. on the NetBackup master and media server

Correct Answer: B
