QUESTION 1

Which processes can run optionally as part of ABAP SAP Central Services (ASCS)? Note: There are 2 correct answers to this question.

A. RFC Gateway

B. Message Server

C. Enqueue Server

D. SAP Web Dispatcher

Correct Answer: AD

QUESTION 2

When installing an SAP S/4HANA Server 1909 system, which actions can the Software Provisioning Manager (SWPM) perform only when the installation is started with the option SAPINST_STACK_XML? Note: There are 3 correct answers to this question.

A. Apply a SPAM/SAINT update

B. Set the password of user DDIC in client 000

C. Set up Transport Management System (TMS)

D. Import additional languages

E. Install an SAP Host Agent

Correct Answer: ACD

QUESTION 3

You are logged onto an AS ABAP-based SAP system. What happens when you release a task of a transport request that contains changes to a program?

A. A data file and a cofile are created.

B. The object list is handed over to the transport request.

C. The repository locks are released.

D. A version is created in version management

Correct Answer: B

QUESTION 4

What are prerequisites to use the Software Update Manager to apply SAP Support Packages to an AS ABAP-based SAP system? Note: There are 3 correct answers to this question.

A. A Stack XML file must exist.

B. The SUM archive must have been provided to the SAP Host Agent

C. The SAP Host Agent must have been configured by SUM.

D. The SUM archive must have been extracted.

E. The latest SAP kernel patch has been applied to the SAP system

Correct Answer: ACD

QUESTION 5

What are start conditions of a background job in an AS ABAP-based SAP system? Note: There are 2 correct answers to this question.

A. Locking user DDIC in client 000

B. Reaching a specific date and time

C. Starling of a dynamic work process

D. Occurring of an event

Correct Answer: BD

A background job in an AS ABAP-based SAP system is a program that runs in the background without user interaction. A background job can be started by two types of start conditions: time-based or event-based. A time-based start condition

specifies a specific date and time when the job should start. An event-based start condition specifies an event that triggers the job start. An event is a message that is sent by an application or the system to signal that a certain condition has

occurred. For example, an event can be the completion of another job, the creation of a file, or the arrival of an IDoc.

QUESTION 6

What is the correct parameter replacement sequence in an AS Java-based SAP system? (Note: the sequences below are sorted by decreasing priority).

A. Template custom Instance custom Template default Instance default

B. Instance default Instance custom Template default Template custom

C. Instance custom Instance default Template custom Template default

D. Template default Instance default Template custom Instance custom

Correct Answer: D

QUESTION 7

In an AS ABAP-based SAP system you have triggered a test print and you notice that no spool request has been generated.

What does SAP recommend you check to analyze the issue?

A. Developer traces of the spool work processes

B. Assignment of device type to output device

C. Transaction Dumps (ST22) and Application Log (SLG1)

D. The log of the host spooler on the corresponding host

Correct Answer: B

A test print is a function that allows you to check the connection between the SAP system and the output device. If no spool request has been generated, it means that the test print was not sent to the spool system. One possible reason for

this is that the device type of the output device is not compatible with the format of the test print. Therefore, you should check the assignment of the device type to the output device in transaction SPAD. The other options are not relevant for

analyzing the issue, as they are related to the spool work processes, the application errors, and the host spooler, which are involved in the later stages of the printing process.

QUESTION 8

Your SAP S/4HANA Server system consists of an ABAP Central Services instance, a Primary Application Server instance, and two Additional Application Server instances. How many system profile files are evaluated for this SAP system during system start?

A. 9

B. 5

C. 8

D. 4

Correct Answer: B

QUESTION 9

During the import of a transport request, which tools write log files to the tmp subdirectory of the transport directory?
Note: There are 3 correct answers to this question.

A. RDDMNTAB

B. R3load

C. R3trans

D. RDDMASGL

E. Tp

Correct Answer: ACD

QUESTION 10

You plan to update an AS ABAP-based SAP system with the role "Quality Assurance System".

Which of the following actions might be required before you start Software Update Manager (SUM) for this system?
Note: There are 2 correct answers to this question.

A. Import the modification adjustment transports from the update of the "Development System".

B. Follow the instructions in the SAP Notes for the used version of SUM.

C. Update the database software.

D. Execute the SAP Load Generator (SGEN) transaction for invalid loads.

Correct Answer: AC

QUESTION 11

What is the definition of "Transport Group" in Transport Management System (TMS)?

A. A collection of systems that are assigned to the same transport target group

B. A collection of systems that share the same transport directory

C. A collection of systems that are connected by transport routes

D. A collection of systems that are controlled by the same transport domain controller

Correct Answer: B

QUESTION 12

You are updating an AS Java-based SAP system. Which actions can Software Update Manager execute? Note: There are 2 correct answers to this question.

A. Lock the development environment

B. Update without using a stack configuration file (stack xml file)

C. Update SAP Host Agent

D. Check the archives\\' authenticity

Correct Answer: AD

QUESTION 13

You are running an AS ABAP-based SAP system. Which parts does the Internet Server Cache (ISC) of the ICM process consist of? Note: There are 3 correct answers to this question.

A. Browser cache

B. CPU cache

C. Disk cache

D. UFO cache

E. Memory cache

Correct Answer: CDE

QUESTION 14

What can you do to determine the SAPUI5 patch level in an AS ABAP-based SAP system?

A. Execute the ICF service /sap/public/bc/ui5_ui5

B. Check the version of software component SAP_UI

C. Use the program WDG_MAINTAIN_UR_MIMES

D. Use the program /UI5/UI5_UPLOAD_PATCH_TO_MIME

Correct Answer: B

QUESTION 15
